

Cross sectorial opportunities and challenges in addressing the SDGs

- Co-operation is important:
 - Co-operation between farmers, processing industry, equipment producers and researchers
 - Cross-sectorial transfer of knowledge/competance
 - Co-operation between different research areas

How to get everybody on board

The farmers:

- Need farmers to avoid gap between them and science. Social aspects are important.

Industry:

- Industry has to be included in research projects

The research institutions

- Cooperation between the research institutions, and within the research industries
- New student programs must be developed to prepare students for the future

Government:

- Government must take the lead and finance development in the right direction to get wanted development if the market is not yet "ready".

Research councils

- Must identify which areas nordic countries and the EU should focus on.

The consumers:

- Also important interest group

From local to global:

- Development goes in the right direction in some countries, but how do we get all countries on board? Change needs including all countries.
