Restriction of technology

The process of the product making is very unique, that is the reason we need special machines.

We did not find the best or economical solution, so we had to make changes in our machines or make new ones. (*Elutriate pastour, herbal distillation machine, etc.*)

The processing works are seasonal, than we build our infrastructure so we are working all year around.

Herbal distilling

- Capacity 1 m³ herbal per 4 hours.
- Mobile. We can take it anywhere.
- More effective than the available in the market.
- The biggest problem is for me, what to do with the hot water, because it is a waste of energy...
